

UI/UX

PROTOTYPE LINK: <https://projects.invisionapp.com/prototype/1dfasd-cjwdw9ln7006s8n0154cnl0hb/play/7e96ab54>

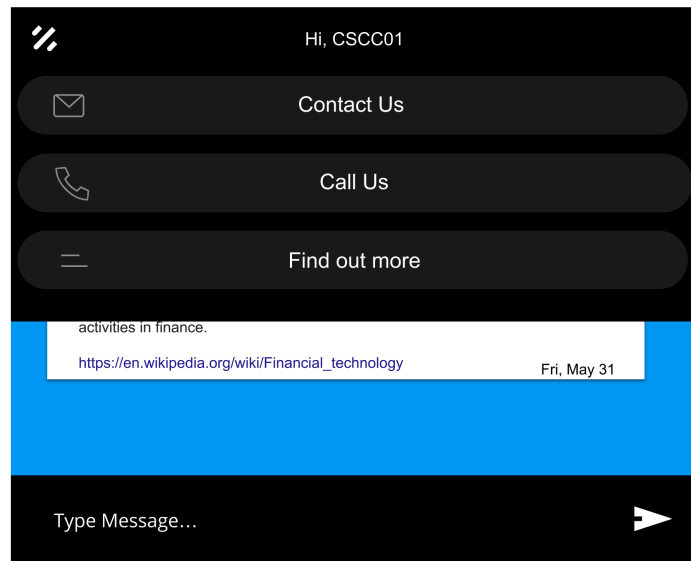

In this project, we have decided to develop a web-based application, below is our UI prototype:

This is the login page of our chat bot app, which provides options login and register to users, later on , we will also have google login feature for user.

This is the chat page, the green icon is chat bot, and the yellow is a user, they both will be replace with icon in our product. Also when user type message(query), there will be a smart auto filling feature.

This is the dropdown of the left top menu button, for now, we have three options, contact us via mail, call us, and find out more. The “Find out more” option will be left for other features like leave feedback, info page, etc.
